

Polymers Product Focus

High-performance polymers are critical for obtaining good quality of Sanger sequencing results. In addition to the polymer quality itself, operational cautions should be taken to avoid particles and bubbles in polymer and the fresh polymer should be used within the recommended time frame.

Polymers are optimized for both Sanger sequencing and fragment analysis to achieve even peak separation and long reads. The cost-effective polymers come with different types that match the polymers in the market:

OP4 Polymer: alternative to POP-4™

OP6 Polymer: alternative to POP-6™

OP7 Polymer: alternative to POP-7™

GENE TECHNOLOGY Polymer

Catalog Numbers	Polymer Name	Unit Size
3706280	OP7 Polymer	28ml*10
3706028	OP7 Polymer	28ml
3705350	OP7 Polymer	7ml*5
3705070	OP7 Polymer	7ml
3605350	OP6 Polymer	7ml*5
3605070	OP6 Polymer	7ml
3605175	OP6 Polymer	3500µl*5
3605035	OP6 Polymer	3500µl
3405350	OP4 Polymer	7ml*5
3405070	OP4 Polymer	7ml
3405175	OP4 Polymer	3500µl*5
3405035	OP4 Polymer	3500µl
